Chemical Data Extractor

Quick Reference

Everything you need while running a search, on two pages

Version 3.2 · Desk card
Print this one. It contains the search steps, expansion depths, status meanings, the export-file map, plan limits and the short troubleshooting table.

Generated from the application's documentation source (`docs/tutorial/quick-reference.md`), so it always matches the shipped interface.

Quick Reference

Chemical Data Extractor v3.2 · desk card

The four steps of a search

1. Type the protein or compound name into **Query**.
2. Leave **Query type** on **Auto** unless you know it is a protein or ligand.
3. Choose an **expansion depth**: 1 for direct hits, 2 for a working network,

3–4 for full pathway and disease context.

1. Click **Run search**, then watch the log and download the exports.

Choosing a depth

Depth	Use it for	Runtime
1 hop	Direct targets, known ligands, structure lookup	20–90 s
2 hops	Screening, mechanism of action, pathway entry	1–4 min
3 hops	Pathway and disease context	3–10 min
4 hops	Exhaustive network mapping	5–20 min

Status meanings

Status	Meaning
Queued	Accepted, waiting for the single search slot or for the engine to wake
Running	Working — the log is live
Completed	Exports are ready to download
Failed	Read the message in the red banner, then re-run

Export files at a glance

File	Open it in
`*_Knowledge_Graph.xlsx`	Excel or LibreOffice
`nodes.csv`, `edges.csv`	Excel, any data-analysis tool, a database importer
`graph.graphml`	Gephi, Cytoscape, yEd
`neo4j_import.cypher`	Neo4j
`graph.ttl`	Any RDF store (Blazegraph, Jena)
`nodes.parquet`, `edges.parquet`	Columnar tools (DuckDB, Spark, R, Python)
`structure_images/`	Any image viewer

Two limits to remember

- **One search at a time.** A second search queues and starts automatically.
- **Exports are deleted about 30 minutes after the run.** Download what you need.

Plans

Plan	₹	Searches	Analyst messages
Free	0	3	5

Single Search	49, once	1, never expires	5
Academic	1,999	30	100
Starter	3,999	50	250
Professional	7,999	300	1,500
Team	9,999	3,000	10,000

Single Search is a one-time payment — no monthly renewal. All other paid plans renew monthly.

Searching patents

Search a compound name to get the patents covering it, or a publication number (`US6280349`, `WO2004018667 A1`) to resolve that patent directly.

When something goes wrong

Symptom	Do this
"Search lost — engine restarted"	The server was replaced. Run it again.
"Connection lost"	Check your network, then run again.
Almost no results	Use the full name or a database identifier.
Amber lines in the log	A database timed out and was skipped; harmless.
Payment not reflected	Do not pay twice. Reload the page.
No patents for a compound	Coverage is strongest for well-known compounds; try the full name.
A patent number returns a search link	The public patent endpoint was rate-limited. Retry shortly.

Full explanations: see the **User Tutorial**.
